Medbury Healthcare Group

The Medical Tourism Conversion Clinic

A tenancy on the ground floor, for Alameda.

A private ambulatory medical campus in Abuja. Five consulting and procedure rooms on a floor of your own, fitted and ready to register, with diagnostics, a day case theatre and a pharmacy already in the building.

One building, and everything a visiting clinic needs inside it.

Lyfe Place Abuja is a converted four-structure compound: a main building over two floors, a guest chalet and a service block. It runs as a medical park rather than a clinic, with several clinical businesses in occupation and one shared front office.

	What is there	Who it serves
Ground floor	Your clinic, the day case theatre, digital X-ray and phlebotomy	You, and the campus
First floor	Consulting and procedure rooms, aesthetics, hair restoration, a doctors' lounge	Medbury's own clinics and a panel of specialists
Guest chalet	The laboratory and reporting	The whole campus
Service block	Dispensary, retail pharmacy and cold chain	The whole campus

You are not renting rooms in an office. You are joining a working clinical campus, and the services around you are already staffed and running.

How the arrangement is structured.

The landlord	Lyfe Place Abuja, the property company within Medbury Healthcare Group that holds the campus
The tenant	The joint venture between Medbury and Alameda. Not Alameda directly, so the clinic's accounts stand on their own
The basis	Arm's length terms, set so that neither shareholder is advantaged or disadvantaged by the tenancy
The demise	The ground floor, less the shared reception and the theatre suite. Five consulting and procedure rooms held for the clinic's exclusive use
The term	Five years, with a conventional deposit against rent and service charge
The charge	One monthly figure, built as three lines: the space, the fit-out and the services

A floor of its own, off a shared arrival hall

The demise is formed from the existing consulting room beside imaging, the open living and dining span, and the old lobby. It reads as the clinic's own floor, entered from the campus reception, with its own signage inside the demise.

FULLY FITTED

The rooms are handed over ready to register.

Built and finished	Lyfe Place	Partitions, doors, clinical flooring welded and coved, hand-wash to every room, decoration and room signage
Serviced and powered	Lyfe Place	Cooling and mechanical fresh air, power and emergency lighting, data and network, fire detection and alarm
Capital and construction risk	Lyfe Place	Carried by us, not by the clinic
Paid up front by the clinic	**Nothing**	**No fit-out contribution and no premium on taking occupation**

Fitted, and furnished if you want it

Fitted means clinically usable on handover. The clinic brings its equipment, instruments and consumables. If you would rather the rooms arrived furnished as well, we will specify and quote that separately.

The services are already here, and already staffed.

	Where	What it means for your patient
Laboratory	Guest chalet	Bloods drawn on your floor, processed on site
Digital X-ray	Ground floor, beside you	Imaged without leaving the building
Ultrasound and echo	First floor	Same visit, same building
Day case theatre	Ground floor, your level	Level access, bookable by the list
Pharmacy	Service block, hatch in the waiting hall	Script filled before the patient leaves
Front office	Campus reception	Received, identified and directed by our team

A patient can be consulted, worked up, treated and dispensed to in one visit, on one site. That is the difference between a medical tourism conversion clinic and a consulting room.

Three categories, and every question falls into one.

	What sits there
The clinic's alone	The demise. Your clinical staff, your patients, your records and clinical governance, your branding inside the demise, your protocols and your fees
Shared, in the service charge	Reception, waiting and concierge. Circulation and staircase. Patient WCs. Security, cleaning, waste and grounds. Power, cooling and water. Fire systems. Network. Facilities management
Shared, charged on use	The day case theatre by the list. X-ray and phlebotomy. The laboratory. The pharmacy. Sterilising

Anything that serves only you sits in your demise and you control it. Anything that serves the campus reaches you through the service charge. Anything you consume by the unit is charged by the unit.

Five years, and your own clinic hours inside them.

Term	Five years	Matched to the period the fit-out is recovered over
Deposit	6 months	Rent and service charge
Campus window	07:00 to 21:00, Monday to Saturday	When reception, security and the clinical services run
Your access	Unrestricted within the window	It is your demise. You set your clinic hours and you do not book time
Outside the window	By arrangement	Sundays and late lists can be run
Patient arrival	Through the campus reception	One entrance, one standard of welcome, then your clinicians

We also carry the administration that visiting clinicians usually carry themselves: temporary registration and immigration support for your team.

What one monthly figure covers.

	What is included
The space	Five fitted consulting and procedure rooms, held for the clinic's exclusive use across the term
The fit-out	Built, finished and paid for by Lyfe Place, recovered across the term rather than charged up front
The building	Power and standby generation, cooling, water, security, cleaning, waste, grounds, fire systems, insurance and facilities management
The front office	Reception, patient identification, navigation and the arrival experience, run to one standard for the whole campus
The network	Connectivity, booking platform and ICT support
The compliance	Regulatory permits, waste licensing, and credentialing and immigration support for visiting clinicians

One monthly figure, quoted as three lines so the basis of each is visible: the space, the fit-out and the services. We would rather show you how it is built than hand you a single number.

Medbury Healthcare Group

Four things, and we can start

- **Walk the floor**
  See the demise, the theatre and the arrival sequence as drawn.
- **Agree the fit-out specification**
  So the rooms are handed over ready for your protocols, not ours.
- **Settle heads of terms**
  Term, deposit, commencement and the fit-out programme.
- **Name your clinical lead**
  So credentialing and registration can start in parallel.
