Medbury Healthcare Group

Lyfe Place Abuja

What we are doing with this facility.

A joint session for the Medbury and Alameda teams. What the building is, who is in it, how the pieces work together, and what each of us gets out of it.

October 2026 / Private and confidential

A medical park. Not a clinic with tenants in it.

The distinction decides everything that follows. A clinic with tenants is one business that rents out spare rooms. A medical park is several businesses that each stand on their own, sharing one address, one front door and one set of clinical infrastructure that none of them could justify alone.

Seven businesses, one building

A medical tourism conversion clinic. Four Medbury clinical companies. A laboratory and an imaging service. A pharmacy. A day case theatre every one of them can use, and a panel of visiting consultants who take rooms by the session without taking a lease.

No single one of those would pay for a theatre, a laboratory and a full front office. Together they do, and each gets the use of all three.

Four structures, 953.9 sqm gross.

Structure	Gross	Net internal	What it becomes
Main building, ground	402.9	282.2	Arrival for the whole campus, the conversion clinic, the theatre suite, imaging and phlebotomy
Main building, first	402.9	284.1	Medbury's own clinics, the bookable room pool, infusion and the members' lounge
Guest chalet	96.0	61.0	Laboratory, reporting and specimen handling
Boys' quarters	52.0	37.0	Dispensary, retail pharmacy and cold chain
Campus	**953.9**	**664.3**	**70% of the plate is usable room on both floors**

Measured from the as-built drawings rather than taken from the brief. The plate is 24.695 by 16.317 metres, and both floors independently return 70% efficiency, which is the check that the measurement is right rather than merely precise.

Medbury Healthcare Group

Seven businesses, and where each one sits.

Business	Where	What it is
Medical Tourism Conversion Clinic	Ground floor	The joint venture between Medbury and Alameda
Day case theatre	Ground floor	Shared. Used by every clinical business here
Medlyfe Aesthetics and Regenerative	First floor	Medbury clinical company
Lyfe Place Hair Restoration	First floor	Medbury clinical company, FUE
Bariatric, Metabolic and Endoscopic	First floor	Medbury clinical company
Medlyfe Longevity and Infusion	First floor	Medbury clinical company, infusion bays
Medbury Diagnostics	Guest chalet and ground floor	Laboratory, X-ray, ultrasound and echocardiography
Medbury Pharmaceuticals	Boys' quarters	Dispensary, retail and cold chain
The visiting panel	First floor	Up to 50 consultants taking rooms by the session

Conversion, surgery and diagnostics, on one level.

	sqm	
Shared arrival	105.2	Reception, waiting, circulation spine, staircase, vestibule and porch. One entrance for the whole campus
The conversion clinic	113.0	Five consulting and procedure rooms, held for the joint venture's exclusive use
The theatre suite	64.0	Theatre, two monitored recovery bays, scrub and dirty utility. Level trolley access to the ambulance bay
Imaging and phlebotomy	35.6	Digital X-ray lead shielded, control, and the draw point. Fixed here by weight, shielding and evacuation

Everything a conversion patient needs happens within a few metres of where they arrive: consulted, imaged, bled, and operated on if it comes to that, without leaving the floor or the building.

Four clinical companies and a visiting panel.

The upstairs floor is typed rather than demised. Rooms are built to a clinical standard and allocated by session, so a room can serve an aesthetics list in the morning and a visiting cardiologist in the evening.

Consulting rooms	3	Bookable by the session
Procedure rooms	3	One with 360 degree access for all-day hair restoration cases
Infusion bays	4	Dedicated, for the longevity and infusion programme
Members' lounge and terrace		At the head of the stair. Part of what the visiting panel is buying
Panel capacity	about 50	Consultants the room hours will carry before the floor runs out

A lease would let this floor to three or four practices. Letting it by the session lets it to fifty, and the rooms are busy in the evenings and on Saturdays when a leased practice would have gone home.

What none of us would build alone.

Shared asset	What it does for every business here
The day case theatre	600 sessions a year of capacity. A conversion clinic, an aesthetics practice and a bariatric service each need a theatre occasionally. None needs one every day, and none could justify buying one
The laboratory	Bloods drawn on either floor and processed on site, so results come back during the visit rather than after it
Imaging	X-ray, ultrasound and echocardiography, available to every clinician in the building without a referral out
The pharmacy	Dispensing and cold chain, with a collection hatch in the waiting hall, so the script is filled before the patient leaves
The front office	One reception, one booking platform, one standard of welcome, one billing and collection function, shared across all seven

The patient journey is the business model.

- **One visit, not four**
  Consulted, imaged, bled, prescribed and scheduled in a single attendance. The thing patients actually complain about is the running around, and this removes it.

- **Referral stays inside the building**
  A conversion patient needing a scan, an aesthetics patient needing bloods, a bariatric patient needing a theatre: each is served by another business on this campus rather than lost to one off it.

- **Shared cost, separate books**
  Each business carries its own profit and loss and its own clinical governance, while reception, security, power, cleaning and connectivity are bought once.

- **A template, not a one-off**
  What works here is a rate card, a service model and a clinical protocol set that the second site inherits rather than invents.

Three different returns from the same building.

	What this facility gives you
Alameda	A conversion clinic that opens with diagnostics, a theatre and a pharmacy already in the building and already staffed, on a floor of its own, with a Nigerian partner whose name opens the market
Medbury	Four clinical companies trading from day one in a building it controls, two support businesses with a captive market, and an operating template worth more than the first site
The visiting panel	A clinical address without a lease, with the support and the equipment that a consultant cannot buy for one session a week
The patient	One building, one visit, one record, and a standard of welcome that is the same whichever door they came in through

None of these three returns competes with the others. That is the test of whether a medical park is designed properly, and it is why the conversion clinic belongs here rather than in a unit of its own.

Medbury Healthcare Group

What we settle in this room

- **The conversion clinic's floor**
  Confirm the demise, the fit-out specification and the opening programme.
- **The theatre**
  Who uses it, how lists are booked between businesses, and who holds the licence.
- **The clinical governance**
  Each business keeps its own, and we agree where they have to meet.
- **The sequence**
  Which parts of the building open first, and what each of us needs ready by then.
