Lagos and Abuja, Nigeria

How to mark

- Trainees: Ezinne Orji and Abigail Oladejo.
- Weekly test: 22 questions, one mark each. Question 20 is five dictated spellings: one mark if all five are right, half if four. Questions 21 and 22 are Mezo scenarios: a safety failure on either (booking a red flag instead of directing to emergency care, advising on medicines, releasing results without consent) fails the test whatever the score, and the trainee re-reads the Safety Card.
- Accept any answer that carries the meaning in plain English. Spelling counts only where the question asks for it, or where the misspelling changes the word.
- Pass: 18 of 22 (about 80%). Below that, the trainee resits the same test the following Friday.
- Exercise: mark out of 5. 5 is client-ready; 3 is correct with gaps; 1 shows the section was not read.
- On the task: write the test score, the exercise mark, and one line on the term or idea to work on. Then approve, or request changes if the exercise needs redoing.
- Time: about ten minutes per trainee per week.

Test 1

1. Chole (bile, gallbladder) + cyst (bladder, sac) + ectomy (removal): removal of the gallbladder.
2. Hepat (liver) + megaly (enlargement): enlarged liver.
3. Dys (difficult) + phagia (swallowing): difficulty swallowing.
4. Thrombocyte (platelet) + penia (deficiency): low platelet count.
5. Salping (fallopian tube) + ectomy: removal of a fallopian tube.
6. Colectomy removes the colon; colostomy brings the colon out through an opening in the abdominal wall.
7. Fast. Tachycardia, tachypnoea.
8. Surgical repair or reshaping. Rhinoplasty, arthroplasty, abdominoplasty.
9. Nephrologist.
10. Caused by medical treatment.
11. Anaemia, paediatrics, oesophagus, oedema.
12. A new abnormal growth, a tumour, benign or malignant.
13. Hyster, metr (also uter).
14. Both sides.
15. Looking inside the abdomen with a camera through small cuts.
16. Ileum is part of the small bowel; ilium is part of the pelvic bone.
17. Arthritis.
18. Mastectomy.
19. Bradycardia.
20. Dictation.
21. Fever and diarrhoea x 3/7 (caller's words recorded first). Red flags screened.
22. The caller has hypertension and diabetes. Write: known hypertensive and diabetic.

Test 2

1. Systolic (pressure as the heart pumps) over diastolic (pressure as it relaxes).
2. Myocardial infarction, a heart attack.
3. Stroke (cerebrovascular accident).
4. The heart's structure and pumping, by ultrasound.
5. Gastroenterologist (some surgeons also do them).
6. Hepatitis B infection.
7. Gastro-oesophageal reflux disease: stomach acid coming back up into the oesophagus.
8. Chronic kidney disease. Hypertension and diabetes.
9. Nephrologist treats kidney disease medically, including dialysis; urologist operates on the urinary tract and prostate.
10. SS.
11. Malaria parasite film (MP) and rapid diagnostic test (RDT).
12. Average blood sugar over about three months.
13. FBS is taken after fasting; RBS at any time.
14. Oxygen saturation of the blood. About 95% or higher.
15. Pulmonary tuberculosis.
16. Benign prostatic hyperplasia, an enlarged prostate.
17. Deep vein thrombosis. A clot that can travel to the lungs; a known risk after surgery and immobility.
18. Spelling as written.
19. Type 1: the body makes no insulin. Type 2: insulin is made but does not work well.
20. Dictation.
21. Chest physician (pulmonologist). Red flags screened first. Do not mention TB to the caller.
22. Stop the booking. Tell the caller to go to the nearest emergency department now or call 112; stay on the line until they have a plan; log it; follow up next day.

Test 3

1. TKR replaces the knee joint; THR replaces the hip joint.
2. Open reduction and internal fixation.
3. Fracture.
4. Fully conscious and alert.
5. Three pregnancies, two births past viability.
6. Lower segment caesarean section.
7. Postpartum haemorrhage. A leading cause of maternal death in Nigeria.
8. Myomectomy removes fibroids and keeps the uterus; hysterectomy removes the uterus.
9. Intracytoplasmic sperm injection: one sperm injected into each egg during IVF.
10. 28 days.
11. NICU gives full intensive care; SCBU is a lower level of special care.
12. Phototherapy.
13. A plastic surgeon operates; an aesthetic physician does non-surgical treatments such as injectables.

14. A raised overgrown scar, more common in dark skin. Any incision risks one.

15. Benign is not cancer; malignant is cancer.

16. Spread of cancer to other parts of the body.

17. A psychiatrist is a doctor and prescribes; a clinical psychologist provides therapy and does not prescribe.

18. Gestational age; general anaesthesia.

19. Spelling as written.

20. Dictation.

21. A fertility specialist; both partners should be seen, the man possibly also by a urologist.

22. Emergency: any fever in a baby under three months. Direct to emergency care now, using the Safety Card script; log and follow up.

Test 4

1. A newly qualified doctor in the one-year internship before full MDCN registration.

2. A medical officer is registered but not a specialist; a consultant is a fully trained specialist.

3. A doctor in the later stage of specialist training.

4. The radiologist.

5. ICU gives full intensive care; HDU is one step down.

6. Subjective, Objective, Assessment, Plan.

7. The first full history and examination at admission.

8. Complains of; on examination; no abnormality detected.

9. Discharged against medical advice. Often because the family cannot or will not pay.

10. Nil by mouth. Before surgery or anaesthesia.

11. Twice, three times, four times daily.

12. As needed.

13. It can be misread as a zero, multiplying the dose.

14. It can be misread as 50 mg.

15. For three months.

16. Follow-up in two weeks.

17. Blood pressure, heart rate, respiratory rate, temperature.

18. The list of possible diagnoses being considered.

19. Pharmacy Council of Nigeria (PCN).

20. Dictation.

21. Any eight of: name/initials, age, sex, location; complaint in own words; clinical terms and duration; known conditions; medicines; allergies; previous results; payer; red flags screened; consent to share.

22. Do not advise. Keep taking medicines as prescribed until you see the doctor, and ask the doctor that question.

Test 5

1. Haemoglobin, white cells and platelets.

2. Kidney function and body salts.
3. Microscopy, culture and sensitivity. The organism has to be grown in the lab.
4. It gives many false positives and is over-used.
5. HIV, hepatitis B (HBsAg), hepatitis C.
6. How fast the blood clots.
7. Examination of tissue under a microscope.
8. Ultrasound.
9. CT uses X-rays and is fast; MRI uses magnets, has no radiation, shows soft tissue better and is slower.
10. Elective is planned; emergency cannot wait.
11. Treatment where the patient goes home the same day.
12. General: fully asleep. Spinal: numb from the waist down, awake.
13. Spinal.
14. Laparoscopic.
15. Blood has been tested against the patient's and is ready.
16. Surgical site infection.
17. A 72-year-old man.
18. Upper GI endoscopy (gastroscopy) and colonoscopy.
19. Spelling as written.
20. Dictation.
21. Usually no: nothing to eat from the night before, 8 to 12 hours, water is fine, as the lab confirms.
22. Do not proceed with the booking. Tell the facility before booking; many pacemakers rule out MRI, and the doctor decides on another test.

Test 6

1. At the decision to admit.
2. Approval from the HMO for a service, issued by the HMO.
3. A fixed amount paid per enrollee per month, whether they use the service or not.
4. The NHIA, in 2022.
5. The Lagos State health insurance scheme.
6. Fee-for-service pays per service delivered; capitation pays a fixed amount per enrollee.
7. Doctors review complications and deaths to learn from them.
8. A written record of something that went wrong or nearly did.
9. An external quality accreditation programme used in Nigeria.
10. Checking practice against a standard.
11. Average length of stay.
12. The share of beds filled on average.
13. The share of revenue by payer type.
14. HMOs pay weeks or months after the service, and reject or cut claims.

15. The share of consultations that become a procedure or admission.

16. Infection prevention and control.

17. Agreement given after the risks have been explained.

18. When the procedure is done, on the bill, settled at discharge or claimed from the HMO.

19. Spelling as written.

20. Dictation.

21. Plan and enrollee number; that the specialist and facility accept the plan; whether an authorisation code is needed and who requests it (also acceptable: what the plan excludes).

22. Do not release results. Results go only to the patient, unless the patient has agreed; offer to help the mother request them, or record her consent.

Exercises: what a 5 looks like

Exercise	A 5
1	At least ten terms, each correctly broken down, misspellings found and corrected
2	Three conditions, plain English correct, a real business point for each
3	All eight clients, correct specialist titles, two correct services each
4	Plain-English version a relative would follow; all abbreviations right; follow-up named as gynae clinic in two weeks for wound review and histology results
5	All three cases decoded; readiness items include implant checked, blood cross-matched, theatre and recovery bed, pre-op bloods, day-case discharge arranged
6	Journey complete, payment points named, guesses marked

The exam

Written paper

- Questions: any ten from questions 1 to 19 of each test, 60 in all. Trainees have revised these, which is intended: the course is about command of the language, not surprise.
- Document to decode: Exam document A below. Trainees write it out in plain English and expand every abbreviation. Counts as 10 of the 60 marks; take 50 questions instead of 60.
- Pass: 48 of 60.

Exam document A (written paper)

> 63M, k/c HTN & T2DM x 10 yrs. c/o polyuria, fatigue, BLE swelling x 3/52.
>
> O/E: BP 170/100, pedal oedema. Ix: RBS 14.2 mmol/L, HbA1c 9.1%, Cr 310 umol/L, Hb 9.8.
>
> Renal USS: bilaterally small kidneys. Dx: CKD (likely diabetic and hypertensive nephropathy), anaemia of CKD.
>
> Plan: refer nephrology, start dialysis assessment, optimise BP and glycaemic control. R/V 1/52.

- Key points: 63-year-old man, known hypertensive and type 2 diabetic for ten years; passing a lot of urine, tired, both legs swollen for three weeks; very high blood pressure, swelling of the feet; high sugar,

poor three-month control, raised creatinine (poor kidney function), mild anaemia; both kidneys small on ultrasound; chronic kidney disease from diabetes and hypertension, with anaemia caused by it; referred to a kidney specialist, assessed for dialysis, blood pressure and sugar to be controlled better, reviewed in one week.

Exam document B (oral, unseen)

> Dear Dr Okafor,
>
> Thank you for seeing this 29 yr old G1P0 at 34/40 with BP 160/110, proteinuria ++ and headache. Known HbSC. She was given MgSO4 and nifedipine stat and is NBM. Fetal heart present, CTG reactive. I would be grateful for your urgent review with a view to delivery, likely by LSCS under spinal. Blood group O Rh+, 2 units X-matched.
>
> Yours sincerely, Dr Bello, MO

- Key points: first pregnancy, 34 weeks; severe pre-eclampsia (high BP, protein in urine, headache); haemoglobin SC disease; given magnesium sulphate (to prevent fits) and a blood pressure drug immediately; nothing by mouth; baby's heart heard and monitoring normal; urgent review for delivery, probably caesarean under spinal; blood group known and two units ready. "MgSO4" is a do-not-use abbreviation on many safety lists, which a strong candidate may notice.

Oral, 20 minutes each

- Clinical letter: give an unseen referral letter of about 150 words. Mark out of 5 for reading accuracy and plain-English explanation.
- Dictation: ten terms from the workbook. Floor: eight of ten. Below the floor the course is not passed and the oral is repeated in two weeks.
- Client explanation: two minutes on one client's clinical service. Mark out of 5.
- Glossary: check ten terms at random. Mark out of 5.

Overall

Part	Weight
Weekly tests	30%
Exercises	20%
Glossary	10%
Written	25%
Oral	15%

- Course pass: 75% overall and the dictation floor met.
- Record the result on the exam task.
