AGELESS

Speaker pack

FOR	Speakers and panellists
FROM	MedLYFE Wellness and Longevity Centre, with Consult for Africa
EVENING	Wednesday, 21 October 2026

In short

- Wednesday, 21 October 2026. Capital Club, Lagos. Be in the room by 6:15pm.
- Send your bio and a photograph by Friday 10 October, or you miss the printed programme.
- Your questions are below. They are a brief, not a script. Tell us what you would rather be asked.
- Speaker focus is what to prepare to open with, two to three minutes.
- 70 guests. The room is for women and men who care about prevention, performance, metabolic health, body composition, self-care, skin health, aesthetics and ageing with more energy and confidence.
- No slides, no lectern. Smart casual.

What we need from you

What	Detail
Bio	80 to 100 words, written as you want to be introduced
Photograph	Any good headshot, high resolution
Corrections	Questions you would rather not be asked, or would rather be asked

By Friday 10 October, or it misses the printed programme and the press pack.

The panel

The Ageless Blueprint: Practical Steps to Look Good, Feel Well and Live Well as You Age. How to translate longevity science into daily choices across metabolism, movement, stress, nutrition, skin, aesthetics and preventive medicine.

45 minutes. Four seats, about eleven minutes each. Chaired by Dr Debo Odulana.

Rule: every answer ends in something a guest can do this week. The chair will come back to anyone who finishes on a generality.

Dr Adedotun Ajelabi

Can We Live to 100 and Still Live Well?

Dr Ajelabi should set the tone for the evening by explaining longevity medicine in clear terms: the difference between lifespan and healthspan, what changes in the body through the 30s, 40s and 50s, and how preventive medicine, advanced diagnostics, AI and personalised optimisation can help people reduce risk, preserve vitality and avoid simply repeating the disease patterns they have seen in older generations.

- What is longevity medicine, and how is it different from waiting until someone becomes ill?
- What is the difference between lifespan and healthspan, and why should guests care about both now?
- What changes in the body from the 30s through the 50s that people often ignore until disease appears?
- How can advanced diagnostics, AI and preventive care help people see risk earlier and act sooner?
- How can people avoid repeating the health patterns they have seen in their parents or older relatives?
- What does MedLYFE do in practice to help a person understand and optimise their body for prevention, vitality and long life?

Dr Timi Adenuga

Weight Metabolism and Longevity

Dr Adenuga should connect metabolic health to longevity and healthspan. He should explain why weight is not only about appearance, how visceral fat, muscle mass, hormones and body composition affect risk, why men and women often gain or hold weight differently as they age, and what a serious medical approach can include: nutrition, supplementation, GLP-1 medicines, other metabolic support and bariatric surgery when clinically appropriate.

- Why does metabolic health matter for longevity and healthspan, not just size or appearance?
- What should people know about visceral fat, muscle and body composition as they age?
- Why do men and women often gain weight or hold fat differently in midlife?
- How should someone think about their ideal weight, waist size or body composition target?
- When should someone consider supplements, structured nutrition, GLP-1 medicines or other medical weight support? And are these new drugs safe?
- Who is bariatric surgery or a sleeve really for, and when is it not the right answer?
- What happens after treatment, and how do people maintain results once the first weight loss phase is over?

Gbemi Giwa

Lifestyle and Behaviour Change for Longevity

Gbemi should speak to the lifestyle and behaviour-change part of longevity. The emphasis is not only that people should eat more protein, lift weights or do cardio, but why those habits matter for ageing well and how busy adults can actually stay consistent. Her angle should cover Nigerian food, strength training, cardio fitness, recovery, habit formation and realistic systems that make change sustainable.

- Everyone knows they should eat better and train. Why is consistency the hard part?
- How should people eat for fat loss, muscle and longevity without abandoning Nigerian food?
- What changes for men and women in the 30s, 40s and 50s around muscle, hormones, appetite and recovery?
- Why do strength training, cardio fitness, VO2 max and mobility matter for ageing well?
- How do you help people build habits that survive work, travel, children and Lagos life?
- What does a realistic twelve week reset look like for someone who is busy and starting again?
- What works, costs nothing and can start this week?

Joycee Awosika

Stress Management & Self Care and Longevity

Joycee should focus on self-care as a serious part of longevity. Her contribution should cover stress, burnout, recovery, mental wellbeing, nervous-system regulation and the practical ways high-performing adults can build care into their lives before exhaustion becomes their normal state. This should be about sustainable self-care, emotional regulation and recovery.

- Why should self-care be seen as part of longevity, not as an indulgence?
- How do stress and burnout affect energy, mood, sleep, decisions and the way people age?
- What are the warning signs that a high-performing person is no longer recovering properly?
- What practical self-care routines can busy men and women build into a real Lagos week?
- How can people use spa, recovery, quiet time, therapy, community or personal rituals without turning self-care into another stressful task?
- What works when someone already feels overwhelmed?

Dr Chinwe Kpaduwa, MD FACS

Maintaining Beauty Aesthetics and Skin for Men and Women as they age

Dr Chinwe should give guests a grounded medical view of aesthetics for men and women. She should explain how the face, skin, fat pads, fascia and facial structure change with age; what happens to skin quality, lines, sagging, pigmentation and hair; how women may experience body changes after pregnancy such as diastasis recti or loose skin; and how to think responsibly about skincare, beauty supplements, nutrition, Botox, fillers, regenerative treatments, lasers and surgery. Black skin safety, scarring, pigmentation and natural-looking outcomes should remain central.

- What actually happens to the face as we age: skin, collagen, fat pads, fascia, bone and facial structure?
- How do ageing patterns and aesthetic concerns differ for women and men?
- For women after pregnancy, what are the common body changes such as diastasis recti, loose skin or breast changes, and what can be done?
- Where do skincare, sun protection, nutrition and supplements help, and where do they stop?
- What do Botox, fillers, biostimulators, lasers or regenerative treatments actually do, and how should people approach them safely?
- Hair loss affects many men and women. What are the common causes and medical or procedural options?
- When does surgery become the right option, and how should people decide without chasing trends?
- What is different about treating Black skin, including pigmentation, scarring and procedure risk?
- What does looking like yourself mean in practice, and what would you refuse to do?

The chair

Dr Debo Odulana, Consult for Africa.

Keep the discussion practical and mixed. Push each speaker to explain what changes with age, what can be done naturally, where medical support helps, what is being oversold, and what one action a guest can take this week.

The conversation moves on if it reaches who may perform what. That is a live regulatory question, not entertainment.

Running order

Time	What
6:00	Arrival
6:30	The opening film
6:40	Can We Live to 100 and Still Live Well?
7:00	The panel: The Ageless Blueprint
7:45	Questions from the room
8:15	Ageless After Hours
