MANAGEMENT AND SETUP, COSTED

Your feedback taken, and the four numbers that have to move.

SUPERSEDED. Retained as the working behind the negotiation, not as an offer. The terms settled on 21 September differ from this paper: the two chief operating officers are employed and paid by Medbury and seconded to CFA, the monthly fee is NGN 3.0M rather than the figure argued here, and the performance remuneration is 3.5 per cent of collected net revenue alone with no share of EBITDA. The Memorandum of Understanding governs.

Most of this is agreed and I am not going to relitigate it. Two chief operating officers, yes. A shared CFA management layer, yes. 3.5 per cent on net revenue gated on both benchmark revenue and EBITDA, yes. A share of profit above the budget your Board sets, yes, and the principle is exactly right. Twenty five million for the setup, yes, unmoved. Four things do have to move: the base, the shape of the setup tranches, when the revenue fee is paid, and the size of that profit share, each below with the working.

What changed since the last paper: Medlyfe is in

The group structure puts Medbury Aesthetics and Medlyfe Wellness and Regenerative both under CFA managed special units. So it is one special division of five businesses: cosmetic dentistry, hair restoration, plastics and dermatology, weight and bariatric, and Medlyfe wellness and regenerative. Medlyfe was not in the last paper and that is what changed. It is also why you are right that it needs two chief operating officers, one across the aesthetics businesses and one for Medlyfe. And it means the revenue the variable is calculated on is all five, so the upside you are giving me is larger than it was. I am pricing the base against the larger scope and I am content for the variable to be judged the same way.

And on the word division, since you corrected me and you were right to. A division is a unit of several businesses that share resources. That definition is the whole argument, because the shared resources are the thing being priced here. The rate card, the record, the back office and the operating rhythm are what the management layer provides, and they are what makes five businesses one division. The same five without them are five businesses at one address, each carrying its own protocols, its own staffing model, its own regulatory file and its own profit and loss. **So the bench is not an overhead sitting on top of the division. It is the thing that makes it one.**

You group by similarity and by size, and you grow a business until it is big enough to stand on its own. That is exactly the job here. These five are one division because at this size shared resources are the only way they are viable, and the work is to grow them to the point where that stops being true. It is also why the structure has a trigger in it rather than a fixed shape.

Which is also where the bench earns its place. A chief operating officer owns a profit and loss, so there are two P&L owners here: one for Medbury Aesthetics and one for Medlyfe. Each will optimise their own, correctly and in good faith. But the cross-sell between them, the one rate card across all five, the shared record and the referral path belong to neither, because not one of those sits inside a single P&L. **Shared resources with no owner do not stay shared.** That is what the bench owns, and it is the reason the five hold together as a division rather than drifting back into separate businesses at one address.

The base, costed from the bottom up

Two chief operating officers at 2.5 a month gross, which is your own cap for the post and not a number I have argued up. Loaded at 22 per cent for the employer contributions set out in Appendix A, because a salary is not what a person costs. Every figure below is either yours or a statutory one.

The post or function	If you hire it	Through CFA	Note
Two chief operating officers, fully loaded	6.10	6.10	One across the aesthetics businesses, one for Medlyfe, at your cap of 2.5 gross. Dedicated, full time, and not shareable with anyone
Finance for a cash-paying business that sells treatment in programmes: deferred revenue on a course of treatment paid for before it is delivered, instalment and refund control, collections, payables, payroll and the board pack	1.55	0.50	
Marketing and sales into a discretionary category: the aesthetics and longevity funnel, conversion on considered purchases, and content that survives a regulator reading it	1.45	0.45	
HR for clinical staff: credentialing files, scope of practice, rotas across the five businesses, contracts and performance	1.00	0.30	
Clinical governance in a category with real medico-legal exposure: protocols per modality, complications and escalation, consent and image consent, audit and incidents	1.55	0.35	
Technology: one configured multi-entity clinical platform, administered, supported and reporting into the board pack	0.90	0.25	
Commercial and pricing for discretionary spend: the rate card kept live against elasticity and mix, programme and bundle design	1.25	0.20	

The post or function	If you hire it	Through CFA	Note
Procurement of devices, injectables and cold chain, with second sourcing and service levels that keep a list running	0.80	0.15	
Executive oversight on anything that reaches your Board	1.40	0.20	
The establishment, monthly	**16.00**	**8.50**	**What it costs, before anything is discounted**

Your 4.2 does not cover the two chief operating officers at your own cap, before a single person behind them. Two COOs at 2.5 gross cost 6.10 a month once loaded. Add the bench and the establishment is 8.50, so 4.2 is short by 4.30. I am not disputing the salary. I am saying that two of them plus a back office is not 4.2.

The bench is not general administration and it should not be priced as though it were. It is finance that can account for a course of treatment paid for before it is delivered, marketing into a discretionary category where conversion is the whole game, clinical governance in a field with real medico-legal exposure, and pricing for elasticity rather than a tariff. Employ that directly and you are at 16 a month plus the desks. Through CFA it is 8.50, because the bench serves more than one client and you pay for the share you use.

What I am proposing: the full establishment, for 7.8

	NGN M a month	What it is
Two COO salaries, gross	5.00	Two posts at your cap of 2.50 a month each
Employer contributions at 22%	1.10	Pension, thirteenth month, NSITF, ITF, group life and HMO. Broken out in Appendix A
Two COOs, fully loaded	**6.10**	
The shared CFA bench	2.40	Finance, marketing and sales, HR, clinical governance, technology, procurement and oversight, carried at CFA and not on your payroll
What it costs	8.50	
CFA absorbs	(0.70)	8 per cent of it, carried by me rather than billed to you
What you pay	**7.80**	**For the full establishment above, nothing removed**

That is about 8 million a year I am carrying, and I would rather show it than bury it. The return on this should come from the variable once the division is performing, not from a monthly cheque while it is being built. Both appointments are yours to approve, you see what they cost, and the search, assessment and onboarding of both is mine and not billed to you.

What happens if the COO salary lands somewhere else

The salary element is a pass-through at actual cost, so the base moves with whatever it takes to land the right person. Worth seeing the sensitivity now rather than arguing about it at offer stage with a candidate waiting on an answer. The 7.8 holds in every line below. What changes is how much of the establishment I am carrying.

COO gross	Loaded, each	Two COOs	Establishment	You would pay	What it buys you
2.00	2.44	4.88	7.28	6.58	Below your cap. A smaller field, and realistically an operations manager being asked to do a COO's job
2.50	3.05	6.10	8.50	7.80	Your cap, and the basis of everything in this paper
3.00	3.66	7.32	9.72	9.02	Above your cap. Opens the field to people already running a division somewhere else
3.50	4.27	8.54	10.94	10.24	Well above. Only worth it for a specific person you have decided you want

Your cap is the middle line and it is what this paper is built on. I am not pushing you above it. But if a candidate you want needs more, I would rather we both knew today that the base follows the salary by the naira movement and nothing else, and that I keep carrying the same 0.70 whichever line we land on. If you fill the posts below your cap the base falls the same way. This is symmetric and I would not propose it otherwise.

Which means the whole question is what the bench is worth

The two salaries are settled at your own cap and I am not arguing about them. So it is worth being blunt about what is actually left in dispute. At 7.8, once the two chief operating officers are paid for, this is what remains for everything behind them.

	NGN M a month	Note
What you pay	7.80	
Two COOs at your cap, fully loaded	(6.10)	5.00 gross plus 1.10 of employer contributions. Not in dispute
Left for the entire back office	**1.70**	**Across 8 specialist functions, about NGN 212,500 a month each**

NGN 1.70M a month. That is what the finance function, the marketing and sales function, HR, clinical governance, the platform, pricing, procurement and my own time come to at this price. It is less than one junior manager, for capability that would cost you 9.9 a month to employ and costs me 2.40 to provide. I am not presenting that as a bargain to be proud of. I am presenting it because it is the number the conversation is actually about.

And the thing I would say plainly. I am content to carry part of this while the division is being built, because that is what a partner does and because my return should come from it performing. What I am not willing to do is have it run as the group's leanest division because I am absorbing its management. A division that looks efficient because its operator is subsidising it is not efficient, it is subsidised, and the day that stops the numbers move. I would rather the cost sat on the page and the division were judged on what it actually earns.

How the base moves each year, and the escalator

A fee fixed in naira and reviewed vaguely at some future date is how this kind of arrangement sours. Salaries move here, the statutory stack moves and inflation is what it is, so I would rather write the mechanism now while neither of us is under pressure. It cuts both ways: if the establishment is smaller next year, so is the base.

Element	How it is set	When it moves
The two COO salaries	Actual cost of the two agreed posts, evidenced on the payroll, open book	On the anniversary, by the naira movement in what they actually cost. Not indexed, because a salary is a fact rather than a forecast. If you approve an increase to keep or replace someone, the base moves by that amount and by nothing else
The statutory stack	Pension, NSITF, ITF, group life, HMO and anything a new Act adds	Passed through when it takes effect. Neither of us chooses it and neither of us can absorb it
The shared bench charge	The fixed element, currently 2.40	Escalates annually by the National Bureau of Statistics headline CPI, year on year, for the month preceding the anniversary, collared at a floor of 0% and a cap of 15%. The cap protects you in a bad year, the floor means it never falls below where it started
If inflation runs past the cap	Headline CPI above 15% in two consecutive years	Either of us may call a review rather than one side quietly carrying it
What CFA absorbs	The monthly difference between the establishment and what you pay	Reviewed at the same anniversary. It is a first-year position while the division is being built, not a permanent feature of the contract, and I am saying so now rather than surprising you with it later
Off cycle	Either of us may call a review early	If the actual cost of the agreed establishment moves more than 15 per cent between anniversaries. Thirty days to conclude it

The collar is the point. A charge indexed to Nigerian inflation with no cap is not something a Board should sign, and a charge frozen in naira is not something I can carry. So the bench escalates by published CPI between 0% and 15%, and if inflation runs past the cap for two years running we look at it together rather than one of us absorbing it in silence. The salaries are not indexed at all, because they are a fact on a payslip rather than a forecast.

And one thing that is not a payroll question. If the division outgrows this structure, combined annualised revenue above ngn 600m, or the fourth aesthetics entity trading, whichever comes first, we look at it then rather than pretending a bigger business runs on the same management. Between the annual review and that trigger, I am comfortable carrying 8 a year in the meantime. Without them I would not be, and you would not expect me to.

The variable: what it pays, and when it is paid

Both percentages are yours in principle and the structure is yours entirely: a share of collected net revenue gated on hitting benchmark revenue and EBITDA, and a share of EBITDA once the division is at or above the budget your Board approved. Modelled on combined revenue across all five businesses, collected net at 85% of gross, and a Board-approved EBITDA margin of 20%.

Combined revenue	Base	3.5% of net	EBITDA at budget	5% of it	Total to CFA	Share of revenue
400	93.6	11.9	80	4.0	109.5	27.4%
600	93.6	17.9	120	6.0	117.5	19.6%
800	93.6	23.8	160	8.0	125.4	15.7%
1,200	93.6	35.7	240	12.0	141.3	11.8%
2,000	93.6	59.5	400	20.0	173.1	8.7%

You told me a share of revenue does not make me care about profit. You were right, and this is the number that fixes it. At your 3%, about three quarters of what I earn still follows turnover. At 5% roughly a third of it follows margin instead, which is the balance you were asking for when you raised the objection. It is also the only place the part of the establishment I am absorbing ever comes back to me, and it comes back only if the division is genuinely profitable.

And the column to watch is the last one. Everything I earn **falls as a share of your revenue as the division grows**, from 27 per cent at four hundred million to about 9 per cent at two billion. That is the right way round, and the opposite of what a flat percentage of revenue would have done.

Component	The measure	When it is paid
3.5% of collected net revenue	Gated on both benchmark revenue and EBITDA, as you asked. Accepted	**Quarterly, trued up annually**

Component	The measure	When it is paid
5% of EBITDA	Payable only once EBITDA is at or above the Board-approved budget. Your structure and your hurdle, rate raised from 3%	Annually, as you asked

On timing, the profit share annually is right and I am not arguing with it: you cannot know what EBITDA did against budget until the year closes. **The revenue fee annually is a different thing.** It is calculated on cash you have already banked, and waiting twelve months to be paid on money collected in month seven means I am financing your working capital for free while carrying two COOs and a back office. Quarterly in arrears, against the gate measured on a rolling basis and trued up at year end, gives you every protection the annual version gives you. If the annual gate is missed, the true-up claws it back.

What CFA runs, and what the company pays for

CFA provides the function. The company bears the cost of doing it. Marketing and sales operations are run by CFA; the marketing and sales spend is yours.

	CFA runs this	The company pays for this
Marketing and sales	Strategy, campaigns, content, the enquiry funnel, conversion and the CRM	Media spend, production, events, influencer and agency pass-through, sales commissions
HR	Recruitment, contracts, onboarding, credentialing files, performance and the rota model	Every salary in the division, advertising, agency fees, assessments and relocation
Finance	The controller and management accountant, the revenue cycle and its controls, payables, payroll processing and the board pack	Statutory audit, tax filings, bank and gateway charges, software licences, and the collections and cashier staff at the sites
Clinical governance and quality	The protocol set, audit programme, incident and complaints process	Accreditation and licence fees, indemnity and clinical insurance, external audit
Technology	Platform configuration, administration, support and the reporting behind the board pack	Platform licences, hardware, terminals, connectivity and payment gateway charges
Procurement and supply	Specification, negotiation, second sourcing and the service level agreements	The goods themselves: stock, consumables, implants, drugs and equipment
Facilities and biomedical	Offered by CFA and not inside this fee. It is a separate retainer of a different nature and it is set out in Appendix B rather than assumed either way here	The building and its running costs under any arrangement: power, water, gases, waste, security, cleaning and the service contracts behind them

Facilities and biomedical sit outside this fee, and that is deliberate rather than a refusal. CFA does provide facilities management including biomedical engineering, and I would like to. It belongs on its own retainer because it is a different discipline with a different cost base and a different risk profile, and folding it into a management fee would hide what it costs from both of us. Appendix B sets out what it would cover and the three things we need to settle before it can be priced honestly.

Which posts sit where, since payables and receivables is a fair question

Two tests settle almost all of this. **First, capability or volume.** A post whose number does not change as revenue grows is capability and it sits with me. A post you need more of at a billion than at four hundred million is volume, and I cannot absorb headcount that scales with your revenue inside a fixed fee without one of us being wrong about it later. **Second, does it have to be at a site to do the job.** If it does, it is the division's. Either way CFA specifies, recruits, trains and supervises the post, and the division's finance staff work to my controls and report into my finance function for standards. The unit lead layer is the reason two COOs can carry five businesses at all, and it is worth saying that rather than leaving you to wonder about the span of control.

The post	Paid by	Why
Financial controller or finance manager	CFA	One for the group whatever the revenue does. Capability, not volume
Management accountant	CFA	Produces the accounts and the board pack from the platform
Payroll processing	CFA	Runs off the same system whether there are forty staff or two hundred
Accounts payable officer	CFA	Supplier invoices and payment runs process centrally, off site, for more than one client
Receivables and collections officers	Division	The number scales directly with patient volume and with the programme book, and they work the accounts of patients your clinics are treating
Unit leads, one per clinic or service line	Division	The operational layer under the two COOs: rota, stock at the unit, patient flow, front desk supervision and local compliance. They run a unit, they do not own a profit and loss, and they sit on your payroll because the number scales with the estate and the job is at the site. I recruit them and set the standard they work to
Patient care coordinators	Division	At the site and in front of the patient, and the number scales with volume. This is the conversion and cross-sell engine rather than a scheduling role, so I write the pathway, train them and am measured on what they convert. They are your employees
Cashiers and front desk billing	Division	Front line. They take money from a patient standing in front of them
Storekeeper and stock control	Division	Has to be where the stock is. CFA writes the control and audits it
Procurement lead	CFA	Specification, negotiation and second sourcing across all five businesses
Medical records and front desk	Division	At the site, in front of the patient
Site quality or infection control lead	Division	Needed on the floor once a site is at volume. CFA sets the standard and audits against it

So on your question directly: payables is mine, receivables is yours. Accounts payable processes off site, centrally, and one officer can serve more than one client. Collections scale with the number of patients and the size of the programme book, they work accounts belonging to your clinics, and at volume you will need several. What you get from me on that side is the revenue cycle itself: the deposit and instalment rules, the chase discipline, the ageing report and a collections performance I am measured on whether or not I employ the people doing it.

What the structure looks like with CFA, and without

The front line is identical either way. Every clinician, nurse, therapist, technician and receptionist across the five businesses is a Medbury employee in both pictures, because they have to be. The difference is the management layer above them and who carries it.

WITH CFA	WITHOUT CFA
COO, Medbury Aesthetics, owns that P&L (CFA)	COO, Medbury Aesthetics, owns that P&L (Medbury)
COO, Medlyfe Wellness and Regenerative, owns that P&L (CFA)	COO, Medlyfe Wellness and Regenerative, owns that P&L (Medbury)
The CFA bench: eight functions (CFA, off your payroll)	Financial controller (Medbury)
Unit leads, care coordinators and front line teams, all five businesses (Medbury)	Marketing and growth lead (Medbury)
	HR business partner (Medbury)
	Clinical governance lead (Medbury)
	Platform administrator (Medbury)
	Pricing lead (Medbury)
	Procurement officer (Medbury)
	Group executive time, drawn off other divisions (Medbury)
	Unit leads, care coordinators and front line teams, all five businesses (Medbury)

What you carry	With CFA	Without	Note
Management posts on your payroll	0	10	Desks, systems, leave cover, appraisals and the cost of a wrong hire come with each one of them
Monthly cost of that layer to you	7.80	16.00	And the right hand column is before anyone has negotiated a salary upward
Front line posts	Unchanged	Unchanged	Identical in both structures
Who answers to your Board for the division	Two COOs, and me behind them	Two COOs, and whoever has capacity	This is the part that does not show up in a headcount comparison

Ten posts against nothing, for a layer that costs you 7.80 instead of 16.00. That is the whole proposition and it is why the fee is not really a fee. You are not buying management advice, you are declining to build a management department. If the division ever grows to the point where you want that department in house, the handover is a conversation and not a rescue, because everything it runs on is already written down and already yours.

The setup tranches

The twenty five million has not moved and I am not asking it to. The shape has to. Every workstream opens on day one across all five businesses, the team is deployed in full from the first week, and additional people are brought on for this specifically. 7.5 does not stand that up.

Shape	Tranches, NGN M	Total	Note
Your shape	7.5 / 7.5 / 5.0 / 5.0	25	
Mine	**12.5 / 5.0 / 4.0 / 3.5**	**25**	**Same four steps and the same total. Fifty per cent on mobilisation**

Mobilisation is not a deposit. It is the cost of starting: five businesses standing up at once, every workstream open because the sequence does not allow them to run in turn, and people who are paid from week one and cannot be paid out of a milestone that has not happened yet. The other 12.5 stays exactly where you put it, released against agreed milestones, and I am happy for those milestones to be as hard as you like.

Lagos and Abuja

Your note puts Lagos and Abuja inside the same five months and the same twenty five million. That works, and I am not asking for more. One exclusion only, and it is the same one that applies in Lagos.

Scope	What it means
Inside the 25, both cities	All of it. The operating system built once, meaning the rate card and the model under it, the protocol set, the platform configuration, the standard operating procedures, the procurement framework and the partner terms. And Abuja's own licensing, registrations, recruitment and commissioning when the site is ready. Abuja costs less to stand up than Lagos precisely because the first list is already written
Not inside the 25	Project management of the Abuja renovation, exactly as in Lagos. If your own contractors run that build there is nothing for me to charge and nothing here to discuss. If you would rather CFA managed it, it is quoted separately when you have a programme and a scope, and it sits outside this fee either way

Where that leaves us

Item	Where it lands	Status
Setup	NGN 25M, unchanged, in tranches of 12.5 / 5.0 / 4.0 / 3.5	Moved
Base	NGN 7.8M a month for two COOs and the full bench, fixed for twelve months then reviewed against actual cost. The establishment costs NGN 8.50M, so CFA carries NGN 0.70M a month	Moved
Revenue fee	3.5% of collected net revenue, gated as you specified, paid quarterly and trued up annually	Timing only
Profit share	5% of EBITDA, payable only in a year when EBITDA is at or above the Board-approved budget. Paid annually. Your structure and your hurdle, rate raised from 3%	Moved
Facilities and biomedical	Outside this fee. CFA would take it on a separate retainer, quoted apart for Lagos and Abuja once the estate question is settled. Appendix B	For discussion

Debo Odulana Consult for Africa / +234 913 813 8553 / hello@consultforafrica.com

APPENDIX A: HOW THE BENCH CHARGE IS BUILT

The working behind the 2.40, so it can be checked rather than taken on trust.

Each function is provided by a named post on CFA's payroll. You are charged for the share of that post the division actually consumes, not for the post. That is the whole mechanic of a shared bench and it is why the number is small.

Function	The post providing it	Loaded cost of the post	Days a month to you	Share	Charged
Finance	Financial controller	1.55	6.8	32%	0.50
Marketing and sales	Marketing and growth lead	1.45	6.5	31%	0.45
HR	HR business partner, healthcare	1.00	6.3	30%	0.30
Clinical governance and quality	Clinical governance lead, nurse or medic by background	1.55	4.7	23%	0.35
Technology	Platform administrator and reporting analyst	0.90	5.8	28%	0.25
Commercial and pricing	Pricing lead	1.25	3.4	16%	0.20
Procurement and supply	Procurement officer	0.80	3.9	19%	0.15
Executive oversight	Partner	1.40	3.0	14%	0.20
Total		**9.90**	**40.5**		**2.40**

The employer contributions inside the loaded salary

Two salaries at your cap of 2.50 are 5.00 a month gross. The loaded figure of 6.10 is that plus the employer costs below. NHF is not in this list because it is a deduction from the employee's basic rather than a cost to the employer.

Employer cost	Rate	Per COO	Both	Basis
Pension, employer share	10.0%	0.250	0.500	Pension Reform Act 2014, minimum 10 per cent of monthly emoluments
Thirteenth month, accrued monthly	8.3%	0.208	0.415	One month's salary a year, accrued at one twelfth
NSITF	1.0%	0.025	0.050	Employee Compensation Act, 1 per cent of payroll
ITF	1.0%	0.025	0.050	Industrial Training Fund, 1 per cent of annual payroll
Group life assurance	1.0%	0.025	0.050	Required under the Pension Reform Act
HMO cover	0.7%	0.018	0.035	Health cover for the post and dependants
Total	**22.0%**	**0.550**	**1.10**	

That is 40 days a month of specialist time, about 1.9 full time equivalents, for 2.40 a month. The same people employed directly would cost 9.90 a month plus the desks, and you would be carrying eight posts to get a fraction of each one's time. The share is set at what the division consumes today. If it consumes materially more as it grows, that is a conversation at the annual review and it is visible in this schedule rather than hidden in a fee.

What this schedule is not. It is not a promise that a named individual is dedicated to you, because a shared bench does not work that way and pretending otherwise would be dishonest. It is a commitment to the function, to the output and to the service levels behind it. If the output is not there, the schedule is the document we both look at.

APPENDIX B: FACILITIES MANAGEMENT AND BIOMEDICAL ENGINEERING

A separate retainer. Declared here so it is not assumed either way.

This is not part of the management fee and nothing above depends on it. I am setting it out because CFA provides the service, because a division this equipment-heavy will need it, and because the worst outcome is the one where it is neither priced nor owned and everyone discovers that on the morning a theatre list cannot start.

What the retainer would cover

The service	What it means
Planned preventive maintenance and the asset register	Every asset listed, with its service interval, warranty position and end of life, so replacement is budgeted rather than discovered
Biomedical engineering	Calibration, electrical safety testing, fault response and uptime against an agreed service level. On a division this equipment-heavy, uptime is revenue and a dead laser is a closed list
Engineering services	Power and its backup, water, medical gases, HVAC in clinical areas, and the resilience testing that proves they work before a list depends on them
Soft services and vendor management	Security, cleaning, waste including clinical waste, pest control, and the service contracts behind all of it held to their terms rather than renewed by habit

Three things to settle before it can be priced

Question	Why it changes the answer
Which estate	The whole of Lyfe Place, or only the spaces the division occupies. These are different contracts, not different sizes of the same one. A whole campus retainer carries common areas, plant, lifts, car park and the landlord side obligations. A division only retainer covers the clinical suites and the equipment inside them
Lagos and Abuja are priced apart	Different buildings, different plant, different vendor markets and different state regulators. One number covering both would be a guess, and a facilities number that is a guess becomes an argument the first time a generator fails
How it is charged	A retainer for the management and the labour, with a separate and agreed pass-through for parts, consumables and third party contracts. I would not mark up a compressor

The question I would put back to you first. Whether this is the whole of Lyfe Place or only the division's spaces is a Medbury decision rather than a CFA one, and it decides everything else. If it is the whole campus then the other tenants and the common plant are in scope and the conversation is with the landlord side of the group as much as with the division. If it is the division's spaces, it is a much smaller and faster thing to put in place, and it can start with the biomedical estate alone, which is the part where uptime turns directly into revenue.

Either way it is quoted separately for Lagos and for Abuja, and neither quote is inside the 25 or inside the monthly base.
